Relevant Experience

Full stack Developer @ JetBase
May 2023 - Present / Wyoming, USA (remote)

> Migrated Angular legacy codebase to React, improved performance, simplified further maintenance and enabled easier adaptation to new requirements

> Created an extensive library of reusable and well documented components and page templates

> Actively engaged in customer-driven development by rapidly iterating and quickly delivering requested features, reducing both resolution time and cost, and enhancing customer satisfaction

> Handed off regular status updates to the product owner to ensure goals were well aligned throughout the project

Full stack Developer @ loadist.io
December 2022 - May 2023 / Tashkent, Uzbekistan (contract)

> Architected and developed front-end of the application with modern technologies ensuring it is visually appealing, easy to use, and performant

> Collaborated effectively with designers, developers, and stakeholders to understand user needs and find optimal solutions

> Implemented full-text search feature with Meilisearch that resulted in increased speed and improved user experience

Full stack Developer @ Synergy Effect
June 2022 - January 2023 / Vilnius, Lithuania (remote)

> Developed the front-end and back-end of e-commerce applications leveraging Saleor, Next.js, GraphQL, and Stripe

> Contributed to the process of carefully selecting technologies for a number of critical components

> Worked on leveraging the monorepo, which enabled the team to deliver multiple e-commerce projects faster. This provided a single codebase for greater speed, precision, and resource savings

Software Engineer @ Edclerk
August 2019 - June 2022 / Texas, USA (remote)

> Collaborated in architecting the front-end of the application, leveraging TypeScript, React, and GraphQL

> Built frontend authorization system using a role-based access control paradigm

> Implemented Optimistic Updates to give users a more consistent and real-time experience

> Initiated adoption of modern standards and tools such as GraphQL Codegen and Ant Design which led to reduced boilerplate, faster design decisions, and increased clarity and confidence with end-to-end type safety

> Developed robust e2e test suites in Playwright, ensuring application quality and reliability

Skills

Languages, Frameworks, and Libraries

JavaScript, TypeScript, GraphQL, React, NextJS, Redux, NestJS, AWS, Node, Git, Firebase, Docker, Gatsby, Express, Jest, MongoDB, Prisma, PostgreSQL, HTML, CSS, Figma

Concepts

OOP, Automated Testing, Accessibility, Authentication and Security, Rest API, MVC, Version Control, Design Patterns

Projects

Usermind / usermind.app

Designed, architected, and developed easy to install widget to collect user's feedback from a website as well as intuitive dashboard to view and gain insights on submitted feedbacks.

Education

Online courses

CS50's Introduction to Computer Science, Frontend Masters, React Training, Egghead
